RELATIONS OF CAN OF MITH FOREIM CRYPTOLOGIC BUREADA

1. During his period of detention (September - December 1946) at the Hq 7707 European Command Intelligence Center, Oberursel, Germany, Wilhelm FHNNER, former Ministerialrat and chief of cryptanalysis in the Armed Forces High Command Cryptologic Agency (CEN/Chi), wrote a lengthy report concerning his past career and his extensive experiences in the field of cryptology. This report was never issued in translation although an inadequate summary by Army Security Agency was issued as TICCM/I-206.

2. It is presently placed to issue a complete traceletion of the entire report in the DF series (DF-187). The strached translation is the fifth of the series and is FENNER's description of the relation of CHM/Chi with foreign cryptologic bureaux.

- 3. Providus TICOM reports of this series are:
- DF 187 The Career of Wilholm FENNER with Special Regard to His Activity in the Field of Cryptography and Cryptanalysis
- EF 187A Organization of the Cryptologic Agency of the Armed Forces High Command, with Names, Activities, and Number of Employees Together with a Description of the Devices Used
- DF 187B The Cryptanalytic Successes of CHI/Chi after 1938
- DF 1870 Relations of OZW/Chi with Other German Cryptologic Bureaux

RELATIONS OF OWN /CHI WITH FOREIGH CRYPTOLOGIC BUREAUX

A. Preliminary Remarks

The relations of the German Cryptologic Bureau (Chi) to the Hungarian, Austrian, Finnish, Esthonian, Italian, Japanese, and Creatian cryptologic bureaux have already been described with respect to the type and extent of these mutual ties so that the present report may be limited to giving supplemental material.

B. Relations with Hungary

From a political point of view it is fascinating to note that this connection was the direct result of a categorical refusal by the Ballhausplatz after Chi had made a vain attempt to make contact with the Ballhausplatz. But even at that time, that is early in the 20's, it turned out favorably for the work itself that there were personal connections between the cryptanelytic sections of the Ballhausplatz and of the Honvedninisterium: thus Budepest learned of the advances of the German Cryptologic Bureau toward Vienna, of the rejection by Privy Councillor (Hofrat) Dr. KLOB, and of the return of First Lieutenant (Oborleuteant) EUSCHENHAGEN (Cryptologic Eureau Ministry of Defense) to Berlin without success. Budapest had fewer inhibiting prejudices, it decided to involve itself in the matter, and sent the director of the Cryptologic Eureeu, Colonel Wilhelm KABENA accompanied by Colonel POKORNY, who was very woll known in military circles, to Berlin and there within a few minutes reached an agreement with Chi on the basis of common work on Italian state telegroms (at that time all in plain code) and of an exchange of the necessary material including code groups and special observations. Not a word was said about working on other countries or about any exchange of messages because the exchange of solved code groups was already that nothing else was thought of for the time being. The egreement itself was

1. In the oral interrogations (TICOM/I-200, para. 1).

- 2. The Forsign Office in Vienna, location of the Austrian cryptologic unit. 3. The Hungarian cryptanalytic section was under the Honvedministerium.

confirmed by a written compact in which there was merely the mutual condition that this compact could be keyt secret from third parties and that the contracting parties of the so-called "Berlin Agreement" should be informed before any extension of these relations to third parties. This agreement remained in force for over twenty years without ever having been violated. That out of the common interest in Italy there areas a collaboration in all other fields good without saying. For the value of the connection with Berlin was obvious: the code books could be solved much more quickly; concepts which were specific in Hungary or Berlin and had caused the [other] contracting party difficulty in its work of solution were solved by the national cryptologic bureau, missing telegrame could be supplied, at least within certain limits; in short, this cooperation had the same result as if each unit had received without expense a number of new cryptanalysts and intercept operators! Nevertheless one is not unjustified in putting the question wither Budapest was really such an extraordinary collaborator. For it is no secret to any military critic that there are certain essential differences in the overall attitude of the Hungarian and the German! And when on the basis of such acquaintance with their psychology the question is raised, what really made Budapest so valuable to the (German) Cryptologic Bureau and /Inter7 to the Cryptologic Agency the answer can only be: the excellent Hungarinn radio intercepts, in particular those from the entire Balkan area: Certainly Budapest also helped out with its interpretations of groups but almost never with its solutions of reencipherments since for the most part these had already been solved in Berlin. It could not be dealed that the Berlin tompo was livelier because they worked wors diligently there, but that would have been the case even without Budepest. But without Budapest Berlin would have had to do for almost two decedes without first-class cable 1 . the and radio intercepts. I make mantion of the uniform ? in which occasional tensions of major policy could change nothing. Both contracting parties had recognized that in such a field collaboration in and of

-TOP SECRET

itself is already an expression of unreserved frankness and obvious honesty

because the contracting parties are constantly in a position to check one

another. The directors or chiefs of the Hungarian cryptanalytic unit were:

Colonel (Oberst) later General (General) Wilhelm KABIMA, from the early 20's to the middle 30's. Then for a few months Lisutement Field Marshal (Yeldmarschalleutnant) (rtd) Wilhelm (?) POKORNY who had made a good name for himself as a clever cryptacelyst of Russian army radiograms during the First World War; then Colonel (Oberat) later General (General) Istvan von PETRIKOVITS until the collagse.

I recall likewise the following persons in the cryptaralytic units: Colorel (Oberst) Franz HAFMONY, Serbia, Bulgaria, and Croatia. Colonel (Oberst) Karl (?) RADDA, Denmark, Czechoslovakia. General (Caneral) PAWLAS, Roumatia. Lieutemant Colonel (Oberstleutmant) SZALLAY, France.

Lieutenant Colocel (Oberstleuteant) Michael BRCIC, Edler Herr von STARY GORY, special field not known.

The two Majors (Majore) ERDOES (brothers), Italy.

Colonel (Oberst) POGANY, tesporary, Poland.

Lieutenant Colocel (Oberstleutnant) von ANDREANSEXY, Poland (?).

Ministerial Government Councillor (<u>Ministerialrat</u>) Dr. von UJFALUEST, England and America.

C. Relations with Finland

While there was a connection during the First World War between the German and the Austro-Eurgenian cryptenalytic units, and in view of this, Hungary was able to decide on collaboration with Chi, the causes of the collaboration with Finland which began in 1927 are to be found in a fact which cannot be denied in the history of the young Finnish Armed Forcess: the actual spiritual germ was the Royal Prussian Jaegerbatallion 27 in which Finnish patriots destined for later military leadership were fighting against Soviet Russia. From this Jaegerbataillon were recruited the f(m)of high rank. It was in connection with this tradition, therefore, that the first feelers were put out in Relaingfore lucking toward collaboration in the field of cryptanalysis. That these conversations brought results may well have been due to my then Chief, Rudolf SCEMIDT, Major in the General Staff and later Director of the War Academy. When I was detailed to Helsingfore in

June 1927 there could be no talk of a Finnish cryptologic bureau; there were as yst no intercept stations, so intercept operators, so cryptanalysts, no apparatus, and no work rocas. All these things were created entraordinarily quickly later on so that to some three years there was a well adjusted organization and it was possible to work with Helsingfors as an equal partner. The center of interest in this collaboration lay naturally in the Scvist Russian field, hence it was here that the first inquiries and the first exchange of information of all corts took place, in which connection it soon turned out that Helsingfors was quite capable of working independently and had already stretched out feelers toward Reval. 4 Until the tragic outcome of the Russo-Finnish Winter War Chi Berlin and Chi Helsingfors were tied together almost solely by Russian cryptographic systems and everything which was necessary to improve reception. . With the greatest caution, but also with comprehensible consistency the relations were maintained on both sides during this war, even when HITLER for political considerations forbade any support of Finland. After the end of the ec-called "Winter Mar", Finland arpanded its range of interest materially and now there resulted that close collaboration which I have doscribed elsewhere⁵ and in which, in contrast to Budapest, it was not so much the intercepts from Helsingfors which played the decisive role as it was the exact and successful cooperation in the field of practical cryptanalysis.

As the only director and later chief of the Finnich cryptologic bureau I have known only Colonel (Oberst) HALLAMAA, who in this capacity rose through all ranks from First Lieutenant (Oberleutnant) on. In Berlin I become fleetingl acquainted with the chief analyst Dr. PAHLE (PALLE ?), and at the Army High Command Cryptologic Agency in Lostzen I met a First Lieuterant (Oberleutnant) MIEK-OJA. Originally (1927) a certain Dr. NIEMINEN was Russian cryptonalyst in Heloingfore; I am not informed regarding his later fate. Since a many were an Heleingfors only a single time I never saw HALLAMAA more than for a minute at a time; I am not well informed regarding the extent of the Finnish cryptologic

4. New Talinn, capital of Esthonia.

5. Presumably in the oral interrogation (TICOM/I-200).

bureau. Ostensibly the direction of theoretical and practical oryptanalysis was during the last years, in the hands of a woman. Government Councillor (<u>Regierungsrat</u>) SCHULZ (of my unit) could probably give details regarding the organization as a whole because he was detailed to Finland in 1943 or 1944 in order with Professor Dr. FRANZ as theoretical man to clarify the solution of the American (strip) systems. The cryptologic bureau of the Finnish General Staff was located during the last war in Mikkeli. As to the whereabouts of HALLAMAA and his associates I have heard nothing positive since the capitulation of Finland. There was a rumor that HALLAMAA had escaped to Swedish territory.

D. Relations with Italy

When the chief of the Italian cryptologic bureau of the General Staff arrived in Berlin about the summer of 1938, there was not a single person in OKW/Chi who was not surprised at this visit. In the course of years the runor that Rome also did cryptanalytic work had become accepted as a fact but without seeking Italy's collaboration no one had expected the Italians to take such an initial step. When Brigadier General Vittorio GAMBA arrived in Berlin he went at once to the director of Chi, Lieutenant Colonel BOETZKL. Only now and for reasons of competency was the Army Inspectorate of Signal Troops (Inspektion der Nachrichtentruppen) informed as well as the Abwebr (Counterintslligence) and the Attache group. The sojourn of General GAMBA, which lasted barely two days, led to an agreement to try mutual work in the French field. From hints dropped by the General it was clear that Rome still had a great many wishes in the French field whereas in the Yugoslav field it was independent and needed no assistance. So only France was urgent: diplomatic and Army! In the course of conversations it came out that the German Navy had been for years on the best of terms with the Italian neval cryptanalysis which fact had induced the General to explore the possibilities directly with Chi. So the case was adequately explained. General JUPPE of the Army Inspectorate of Signal Troops (Inspektion der Nachrichtentruppen) as responsible superior gave his approval of collaboratic and Admiral CAWARIS was also agreeable. Thus there was nothing standing in the way of a promising cooperation except the fact that Rome adhered only superficial

to the agreement for an exchange of traffic and code groups: the courier dispatches remained lying without any obvious reason in the office of the Itulian counterintelligence liaiaon officer, Earon FIORIC; no answer came to our questions; instead French code groups were neat back which Chi had recently sent to Rome. Into this state of varatious disorganization there burst unerpectedly the resentment of circles around the Chief of the Armed Forcen High Command (OKN) who were by no means satisfied with the Roman agreement! JODL claimed he had not been informed; JUPPE could not even recall having met General GAMBA; CAMARIS stated rightly enough that the whole affair was no concern of his, but whoever had said A in this situation had to may B too. And now General FELLGTERFL assumed full renponsibility but made the single condition that there should be frank honest collaboration as there was with Budapest and Helsingfors. In Rome they know nothing of such a crimis but were thinking caly of getting as prempt help as possible against France, on both Army and diplomatic traffic. In this situation I was sont with Employee (Argestellte) TRAPPE to Rome in order (a) to organize the collaboration and (b) to have TRAPPE give the necessary explanations and documents for working on French diplomatic and Army cryptographic systems. In spite of impeccable scoull form, GAMBA throughout the entire 10 to 14 days remained very renerved in all matters relating to the work. On his deak lay not a single piece of paper from which an inference might have been drawn as to what went on in the office! I got the following impression of the organization as a whole: with the exception of the Navy the Italian Armed Forces had far too few trained intercept operators. An intercept plan for conitoring foreign high-powered transmitters and the high military staffs of foreign countries existed only on paper; there was no need of anything else since as yet there was no one who could have carried out any reasonable and exact intercept work. They were reading a few plain codes of the French Government, the plain English and American codes, but remarkably enough the resuciphered Yugoslav codes, the solution of which presupposed not merely patience but some real ability. Moreover, the Swedish Government code was being reed which had caused Chi in Berlin extraordinary difficulties; Further questioning on my part then revealed the fact that the Italian

-TOP-SECRET

cryptologic bureau had a far more lucky hand than the German Abyehr in the procursment of foreign code books: for Rome had the Swedish code "tutto completto", and likewise a Turkish code on the solution of which Berlin was having to work industriously. The solution of the Yugoslav system still remained a riddle, all the more so since the expert did not impress one as especially intelligent. In the following period the courier connection became better and Rome itself noticed that the regular exchange of traffic and code groups as well as of resucipherments was profitable. Consequently the requests scustimes lacare greater: Rome's weak point still remained France and its own cryptographic systems! Rome requested aid in the French field, Berlin insisted on a change in the Itolian Army systems because what Rome afforded in this area was not tolerable from a military point of view. Years before, a revision of the Italian navel cryptographic systems had been undertaken at the request of the German Government; now there was an indisputable danger that important tastical or even surategic information would become known to the Allies through cryptanelysis of Italian Army redicgrame. When I was again sent to Rome exclusively to gat this matter straightened out (December 42) I could not fail to notice a resistance to the German demands: the deadline for presenting samples of encrypted text was not set; there was postponement. from day to day, even from hour to hour! I do not mean to ansert that Rome was intentionally carrying on enbotage; no, in my opinion these demuds were at that time really too great for a country which supposedly had no illiterates but also had no signal troops, no signal corps in which there could possibly be enough people for whom working with paneil and paper was not comething unusual. But an aversion to the unambiguous results of German analysis made itself manifest no that a tension developed which could naturally only lead to estrongement. The makness and honcety found enong the Hungarians and Finne was wanting!

- TOP SECRET-

Rome turned over only a small part of the cablegrouns and radiograms copied in the main telegraph office; Berlin thereupon cut down on the number of telegrams to be copied for Rome. Rome did not answer all questions from Chi in Berlin, Chi in Berlin thereupon postponed the answer to Rome'n part inquiry for four weeks. In addition there were internal tensions in the Roman bureau: some of

the people considered General CABA too and to be able to collaborate suscensibility be enjoyed the special personal good will of MUSSOLINI. For they remain it was necessary to show consideration for the ald gentleman. The coming Statian catastrophe could already be foreseen but only a very few of MANDA's cellatorators could see this and had the courses to apask of it. Thus the contest with Home in the final acalysis will eaching but a great doed which rever got beyond goed intantions and not too vigerous buginelogat There is no point to raising the question as to who was to blaze sizes the employation of this fitsee is obvious: both partners had worked from false easinguions, so with Baulin had thought that Rome would do more; Roma had throught then the collaboration with Berlin would render ony mental effort of its own menorestary. Both proteers were disappointed in one another, but Revea devaidivecess and Bowlin rebuctures deemed it has not to deater up this sick organism. Therefore when the colleges of Italy became a certainty the cryptelegic affects uniting hous and Seriin has already goos to alson: for wonks Carlin had stor off no courier poirs.

Of the perconnol of the Armen cryptologic burgen I become acquained with: Colonal COSMANDET, Deputy we General CAMEA;

Larger Mr. SERRAGLI, writed on Mugisleria;

Constain DE VICE, warken og Ernach Army (an fær va I resall);

Wirst Lieubonaux (Res: DIGI, field not known.

After the collepse of linky part of the Roman comptonalytic section weak to northern litely, probably to the Boser ande. I presume dust COEMACHER would head of this unit, but it may have been a navel officer, Coate del MESERI von SERDITIERS. This regularized attempted to establish contast with OKN/Chl. For this turbone it made due of German reval offices. After brief deliberation with this month Italian comptunalytic section would be possible because of impending military events, CEN/Chi declined.

In the view of Chi these circles were much less concerned with any productive cooperation then with a dependable living for a few dozen people who would have gottom into very serious straits unless attached to some German unit. The

German Wavy, however, could have looked out for them all that is what happened. Whatever becars of this Italica unit is to longer incen to me.

E. Melations with Japan

"The Chief of the Japaness cryptologic with, Colousi MAYASHI, later Hillitery Attache in Sudapezt, opeat some years in Serlis after having been fortunate shough the parton Carney of one of the last trains from the East. His vicit, had not been expected because so one believed in any possibility of collaboration with Japan, a thing which scened Lagracticable without constant contact with Telyo I have already nentloard elsewhere that EAYASHI brought along the Brown and Gray Codes, 6 and thus tried to prove in a may his readiness to collaborate housefuly. There you so fumble as to the honorable intentions of both particles, bus this was not sufficient to create the prerequisite for a grafitable colletoration. In the first place in was not very easy to deal with HAVAGHT because be know only little Courses and no other European language; is the smooth place, . In consequences of the lock of constant commutention with Tokyo he see preutice ally Loft up in the air. If alone, without his staff of collaboratore, was therefore rat a pursher of prathive value in splite of all the good will. Thus the occurional exchange of ideas and Timurah to a few groebloss regrading Mar Sovie's Ressies Aver armitegraphic systems, without being able to assume the form of comme sider's even in this field since there we so Russian traffic them Eautore Asia and therefore a remoted Remion system of the Manchurtan Army could not such by bosted. Concerner Halfall care, he was a welcome guest hohind minese pleasante suble one could assume vari knowledge are speed-maining ability, in cush a situation, however, to use could be made of these qualities. I have alarady reported that. when the Japanese and the Corner catestrophes were already deproidable, ANDSTI asked for regular information in the form of the 1000 " " menages and that this request was fulfilled. A supplemental observation is in crise here. Down to wid-summer of 1944 the

and st

general hast marking had been to comply with caution as i measurable with Superver requists and demonis to reveal any sourt markers. In view of the poly of Japan this attibute was antipul for CEN(Cr). On the basis of sume event continues to me HENER there detreed that everything should be above to the Sepanese and brought to their attention without resource. Hoven theleds a question was malked at hostquarters regarding HAMANE's request and, corresponding to the instructions, smaller of the decrypted mentages to be delivered. Grassqueetly not a single decrypted mentages to be delivered. Consequently not a single decrypted mentages to be covariant at the given way likely to influence the decimient of the Copanies Covariant at the give the minimum with the weather of the sum of the second of the second of the sum which would have been in any way likely to influence the decimient of the Copanies Covariant at the give the minimum the induce of the second of the second of the second of the method of the supervised and the method of the second of the second of the method of the supervised at the such the of the second of the method of the supervised at the such the of the shore to make the method of the supervised at the attributed could gravantee the that an middle of would be caused by the delivery of the decrypted method of the second of the

Anide their MAMANNEI I becaus acquainted while fictor later histomast Coloral, HENET, regarding when I assume that he was an enclotant to the Military Attache, when an officer SARDFAN whose formations I did not know a he constitually foldered from my encorrect the Secretions I did not know a he constitually foldered from my encorrect the Secretions runds works which the Military Attache himself, that was savely in 1985. After the end of February 1985 I heard nothing more to any of the Secretions. If I were to observe to rise such the with the departure argument, a basis observented then depite good will on the part of both percess any real basis for collaboration was entirely contage.

F. Belettuns with Conatia

Even the undependent state of Orestin entertained the idea of setting up a cryptologie " "" Forces with cryptographic systems and to decrypt foreign Army and diphonatic messages. It was not quite clear what the Orestian General Staff wanted to do. Consequently in the autumn of 1952 I was much to Syram⁸ to learn details and make a report. The first demand of the

8. Alternate ters for Zagrob Halter's notof.

Croatians was to provide the small Croatian Akmy with a suitable cryptographic system. I could mercily take note of this request since compliance did not fall within the competence of OE: /Chi. No less keen was the interport in a Creatian cryptunalytic unit patterned after OXH/Chi. Over against the good will and the enterprising spirit of the young officers stoch, to be sure, the doubts of the old efficers who act without reason locked at the reverse of the modul: the financial costs of such as organization! For the financial condition of the little country was already then greatly strained and construct urrest andongered all normal trade and commerce. But even if money had been available most abundantly, the time was as unfavorable as possible for founding such a unit: Creatia had no receivers and did not have the other equipment necessary to intercept, forward, and work on the massages of foreign governments: There is as question but that some young and some old officers you'd have been zeady to work in the cryptaneigtic unit but then the young once would have been missing in the field and the older ones in the staffs, or also the state wrecoury would again have been heavily burdened broaks the demand for well gaid work appropriate to a person's station was very great. And even if all that could have been taken were of, they looked all personnel for an intercept pervice. Not the primary thing with any cryptanalytic wait is the procurses with of measaged without which the cloverest aryptaralyst can to mothing. And with the bast of will such as organization cannot be related from the ground by a stamp of the foot. Though the younger generation might reprouch the older officers with epethy and the cantious generals, who sil term from the old Austro-Hurgarian Away, might child their younger conncies for being hot-headed. neither of these points of view was decisive but solely the fact that without an established intercept service no adequate interception of messages is concaivable and therefore ".... and slowly die for want of material to work on.

I do not remember the newes of the Greatian officers when I met at that time and I have never beard anything more of these people.

TOP SECRET

G. Relations with Bulgaria

Shortly before the closing of the /Iron 17 Cate, in the autumn of 1943, there appeared in Berlin a commission of Bulgarian officers and non-commissioned officers with a request that these men be initiated into the secrets of cryptanalysis. Bulgaria had repeatedly made such advances earlier and sont a staff officer MICHAILOFF to Chi to have the colution of Roumanian Government telegrams explained to them. This explanation was given, also an introduction to cryptology; but nothing was correctly understood because we could regularly see from later inquiries that the fundamentals of the Roumanian reencipherment had not been grasped. This commission, under the leadership of an able Major of the General Staff, made a very much better impression. It is true that the visit of these gentlemen did not please us, but since the Attache group had approved the visit we had to make the best of it. Therefore the order was given to explain to these wen in a short survey the systems of cryptography and to touch upon the most general principles of cryptanelysis; likewice, at the special request of the Bulgerian General Staff the principle of solving Yugoslav Covernment systems. The loctures lasted some eight days all told. As was to be expected, collaboration was planned. Of course, the Bulgarians had been told, in agreement with the Foreign Office, that the actual decipherment of foreign diplomatic messages were done only in the Foreign Office and thet therefore any questions regarding direct collaboration must be addressed to the Milhelmstrasse. Chi had expressed its readiness, however, to assist with edvice on organization incomech as foreign Army systems were not worked on at OKM/Chi but at the Army cryptologic bureau. Hell, the Bulgarians obvicualy no longer needed advice in the matter of organization or else they had already convinced themselves that no cryptanalysis is possible without an accurate intercept service, - in my sure - ----- ----- sofia and I have never heard anything more regarding the gentlemen of this commission whose names I have also not ratained. Judging by the state of developments it was clear that Sofia like Agram did not possess even the mucleus of a cryptanalytic unit of its own.

E. Relations with Rousanna

Reports to the effect that Bacharest had a cryptanelytic unit ofter the type of CKM/Chi nover reached ma. The Government cryptographic systems were so peer for two deceness that one cannot assume there was any cryptologic unit to give advice. I assume that the Cauman Army cryptologic bureau was obliged to intervene in the cryptographic work of the Roumanian Army and that in this way some influence was exerted on the Roumanian Army but nothing over baceme known to me regarding the fact and the extent of such cooperation.

I. Belations with Spain

I have already reported that during the Spanish Civil War there very connections between German volucteer cryptanalysts and a Spanish cryptanalysis unit but that I am unable to say anything regarding the extent or the intensity of these relations because the volunteers wore poither subcriticated to me por were they obligated to give is any account of their activities.9 I know that at that tive work who does primarily on cryptographic systems of the Mede and that is nost cases these very solved. For none of these systems rould be considered up to date is a cryptologic sense. They were limited to all sorts of substitutions and primitive transpositions but it never happened that the Legion Condor requested the cryptologic bureau of the German Ministry of Defense to york on an unsolved Red cryptographic system. Later on inguiries cane occasionally from Syain which regularly had to do with French Government plain codes, e.g., the table of indicator groups, or the quary whether Berlin was reading a certain type of system. If I asked about the source of the inquiry I use given the care SARMIENTO, cutensibly an officer of very chivalrous spirit and ascellent social form. Eccover, I never found out whether Madrid was doing cryptanalytic work and, if so, at which Government office or which section of the General Staff. On the basis of the ---assume as cortain the existence of a Spanish cryptanalytic unit but I am likewise inclined to assume that this Spanish unit limited itself to work on French

9. TICOM/I-200, para. 1.

Government cryptographic systems and in this field gave preference to plain codes. I myself have never been in Spain and have never become acquainted with any Spaniards.

J. Relations with Estheria

In the mid 30's there were relations between Chi and the Esthonien cryptanalytic unit. How these connections were brought about is unknown to we since I had so part in the event. Some time later, however, two Esthosian officers vers detailed to me and worked in the Russian section. They worked on Army systems of the Soviet Army. The sames of these Esthenian officers were OUN and KALMUS. I think they were both First Lieutenants. Both were far from unskillful, but OUN was considered the mors gifted. As far as I can recall, work was being doos at that time on small code books with partial reonciphorment by means of digit substitution tables: I think the little code books had a total of 1,000 groups. Of the three digits of each group not all were reenciphered. The traffic, so for as I know, was not exchanged with Reval but code groups, resocipherments and important observations probably were, so that the relations were quite profitable; when Esthesia fell into the hands of Soviet Russia, OUN supposedly went to Helsingfors; what became of KAIMUS I do not know. After that I gave no more thought to the Esthonian cryptenalytic unit and never heard anything wore of it. So far as I can judge, not merely the official relations wars good but likewies the personal relations. For my superiors went to Reval repeatedly and always spoks with praise of the hospitality of the Esthenians.

K. Concluding Remarks

In the relations between Berlin and foreign cryptographic units, Chi Berlin indisputably represented the center which set the pace. Stated more exactly: I do not venture to estimate the influence of the other groups and sections of ORW/Chi on the cryptoservice of friendly countries but he one from of or, p. analysis Chi was the important center and its judgment was considered final and valid. This also explains the fact that the attempt of the above-mentioned cryptologic bureaux to work directly with one enother by passing Chi Berlin had no success. It became known to Chi for instance that Colonel vos PETRIKOVITS (Eudapest) went to Helsingfors to see HALLAMAA, nor did it remain a secret that

JOP SECRET

Michael LECIC (also Budapest) went to Rome and that SEIFERT (Vienna) contacted Budepost directly during the Schuschnigg crisis, - Chi let all this happen since the mere position of Berlin as communications center gave Chi such superiority with respect to traffic that each of the cryptologic bureaux of the Allied States was forced to get is direct touch with Berlin again. Chi had a direct telegraphic connection with the cryptologic unit in Budapest; HALLAMAA could also be reached in a few miantes. In view of a technical connection which functioned in this way, what was the significance of an attempt to establish direct contact between Eudapest and Helsingfors? The latter could not get beyond initial stages without again requesting the aid of Berlin at the first opportunity. But quite apart from the advantages of its traffic position, it was the precision of the work of the cryptanelysts, their diligence, and the speed with which current tasks were disposed of and every inquiry, even apparnotly unimportant ones, were answered, which gave the cryptanalytic section of Chi the dominant position which it enjoyed for two decades emong the "Axis Powers". Among them Chi was the power source from which cryptacalytic effort emenated and to which cryptanalytic effort returned.
